Valuation Analysis

Anarion Systems BV | Fictional SaaS Company

DCF · WACC · Trading Comps · M&A

Prepared as part of Financial Analysis Portfolio
October 2026

Valuation Analysis | Anarion Systems BV

Executive conclusion

The valuation methods support an enterprise value centered around €41.4m. The two DCF approaches converge at approximately €44–45m, while market-based methods provide a more conservative cross-check. The close alignment between the Perpetuity Growth and Exit Multiple DCFs strengthens the internal consistency of the valuation.

€41.4m	€45.0m	€44.3m	€40.4m
Average EV	DCF - Perpetuity	DCF - Exit Multiple	Precedent EV

Valuation overview

Method	Enterprise Value	Equity Value
DCF - Perpetuity Growth	€44.981m	€48.821m
DCF - Exit Multiple	€44.296m	€48.136m
Precedent Transactions	€40.378m	€44.218m
Trading Comps	€36.091m ¹	€39.931m ¹

Key valuation drivers

- WACC of 10.79%, including a Kroll/CRSP-based size premium, captures the additional equity risk of a smaller private company.
- Perpetuity Growth uses a 2.5% terminal growth rate; Exit Multiple uses 9.0x terminal EV/EBITDA.
- Negative operating NWC supports strong cash conversion as annual prepayments scale.

Interpretation & risks

- DCF values sit above market-based approaches, reflecting Anarion's projected margin expansion and long-term cash generation.
- Valuation remains most sensitive to WACC, terminal growth and terminal multiple assumptions.
- Trading comps are a conservative reference because Anarion is loss-making in FY26-FY27 and is therefore valued primarily on forward revenue.

Valuation takeaway The methods indicate a defensible valuation range with a central enterprise value of approximately €41m and strong DCF support around €44–45m.

¹ Trading Comps base EV reflects the average of FY2026 and FY2027 median EV/Revenue implied valuations. Average valuation is the simple average of the four base enterprise values.
